

Close sales from wherever you are.

And save money in the process.

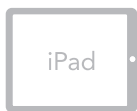

These days, your business probably doesn't stay in one place, so why should your payment device?

Mobuyle™, a mobile payment solution brought to you by Heartland Payment Systems®, allows you to close a sale wherever you are, quickly and securely. Turn your smart phone or mobile device into a credit card terminal by simply downloading the Heartland Mobuyle App and connecting the Heartland card reader to your phone's audio jack. Accept all major card brands, corporate cards and Heartland gift cards through your phone, without storing cardholder data.

Get the first truly comprehensive mobile payment solution developed by a payments processor, with Mobuyle.

- **Secure** – Coming to you from a leader in cardholder data security, Mobuyle's AES-encrypting reader keeps your transactions secure. All transaction data is encrypted and passed to Heartland, so card data is never stored on your mobile device.
- **Cost-Effective** – There are no middlemen, outside gateways or third party providers to increase your costs — you get everything you need from one source. Plus, qualify for great rates with Heartland based on criteria like your processing volume and average ticket price. So you don't get stuck paying more with a one-price-fits-all-rate.
- **Reliable** – Mobuyle's store and forward feature ensures you stay in operation by accepting payments when you're in areas without Wi-Fi access or cell phone service.

Mobuyle Compatible Devices:
