

Mobile Payments

- Secure transactions
- Cost-effective solution
- Not reliant on Wi-Fi or cell service

Grow and Protect your Business

These days, your business probably doesn't stay in one place, so why should your payment device? Heartland mobile payments allows you to do business wherever you are, quickly and securely.

Your Mobile Device = Card Terminal

Simply download the Heartland Mobile Payment app and connect the Heartland card reader (phone jack) or iCMP EMV Reader (Bluetooth) to your mobile device to accept all major card brands, corporate cards and Heartland gift cards, without storing cardholder data.

Secure Processing

Coming to you from a leader in cardholder data security, our Mobile Payments AES-encrypting reader keeps your transactions secure. All transaction data is encrypted and passed to Heartland, so card data is never stored on your mobile device.

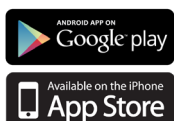

Simple, Cost-Effective

There are no middlemen, outside gateways or third party providers to increase your costs — you get everything you need from one source.

Reliable

Our “store and forward” feature ensures you stay in operation by accepting payments when you're in areas without Wi-Fi access or cell phone service.
